INSTRUCTORS

KATHY GWILYM, PE
Senior Civil Engineer
Key project experience: Complete street design, LID and permeable pavements for public works and private projects.

Curtis Hinman
Senior Scientist
Key project experience: Research specialist in the performance and design of LID practices.

PROGRAM OVERVIEW

• 2012: Public and private partners engage state legislature to fund program
• June 2012: LID Training Steering Committee convened
• 2012-2013: Washington State LID Training Plan developed: www.wastormwatercenter.org/statewide-lid-training-program-plan
• 2014: Training program built from state LID Training Plan
OVERVIEW OF PROGRAM

- Implement first phase of trainings (September 2014 through May 2015)
- 49 trainings offered in western and eastern WA first year
- 45 trainings scheduled for western and eastern WA in current phase (through June 2016)
- Three levels: Introductory, Intermediate, and Advanced
- Statewide LID Certificate now available

Statewide LID Training Program

OVERVIEW OF PROGRAM

**INTRODUCTORY**
- 2.1 Introduction to LID for Inspection & Maintenance Staff
- 2.2 Introduction to LID for Developers & Contractors: Make Money be Green

**INTERMEDIATE**
- 3.1 Intermediate LID Topics: NPS Phase I & II Requirements
- 3.2 Intermediate LID Design: Vegetation, Tree Selection & Placement
- 3.3 Intermediate LID Design: Site Assessment, Planning & Layout
- 3.4 Intermediate LID Design: Rainwater Harvesting System & Vegetated Roofs
- 3.5 Intermediate LID Design: Hydrologic Modeling
- 3.6 Intermediate LID Design: Green Streets

**ADVANCED**
- 5.0 Advanced Topics for Long-Term LID Operations: Bioretention
- 5.1 Advanced Topics for Long-Term LID Operations: Permeable Pavement
- 5.2 Advanced Topics in LID Design: Permeable Pavements
- 5.3 Advanced Topics in LID Design: Site Assessment, Planning & Layout
- 5.4 Advanced Topics in LID Design: Hydrologic Modeling
- 5.5 Advanced Topics in LID Design: Green Streets

**ADVANCED TOPICS FOR LONG-TERM LID OPERATIONS**

**PERMEABLE PAVEMENT**

**LOGISTICS**

SCHEDULE
- Classroom training (8:30-11:45)
- 1-hour lunch break (11:45-12:45)
- Classroom training (12:45-1:30)
- Field exercises (1:30-3:30)

OTHER LOGISTICS
- Restroom location
- Food
- Turn off cell phones
- Sign in and sign out
LEARNING OBJECTIVES

1. Understand the structure and function of permeable pavement components.
2. Gain an in-depth understanding of the primary inspection activities and tools to maintain permeable pavement function over time.
3. Know the primary maintenance requirements for permeable pavement.
4. Identify maintenance problems and associated solutions necessary for long-term function of permeable pavement areas.

AGENDA

1. introduction
2. permeable pavement O&M
3. O&M costs
4. administrative tools
5. wrap up & field exercises
INTRODUCTION
LOW IMPACT DEVELOPMENT (LID):
Introduction to Principles

- Site design & planning techniques emphasizing conservation
- Use of small-scale engineered controls to closely mimic pre-development hydrologic processes
- Careful assessment of site soils and strategic site planning to best use those soils for stormwater management

INTRODUCTION
LID: Introduction to Principles: Pre-developed Forest Hydrology
LID: Introduction to Principles: Developed Condition Hydrology

INTRODUCTION

LID: Site Design and Planning Techniques

- Minimize disturbance
- Reduce impervious surface
- Protect and restore native soils and vegetation
- Manage stormwater close to the source

Traditional LID

INTRODUCTION

LID: Small-Scale Engineering Controls

- Infiltration
- Filtration
- Storage
- Evaporation
- Transpiration

Conserve or regain pre-developed hydrologic functions
INTRODUCTION

LID: Best Management Practices (BMPs)

- Rain Gardens (BMP T5.14A)
- Bioretention (BMP T5.14B)
- Permeable Pavement (BMP T5.15)
- Vegetated Roofs (BMP T5.17)
- Downspout Full Infiltration (BMP T5.10A)
- Downspout Dispersion (BMP T5.10B)
- Concentrated Flow Dispersion (BMP T5.11)
- Sheet Flow Dispersion (BMP T5.12)
- Compost Amended Soils (BMP T5.13)

LID: Permeable Pavement

- Infiltration
- Filtration
- Storage
- Evaporation
- Transpiration

INTRODUCTION

NPDES PERMIT LID O&M REQUIREMENTS:
Requirements Vary By BMP Classification

• On-site Stormwater Management BMPs
• Stormwater Treatment and Flow Control BMPs/Facilities
NPDES MUNICIPAL STORMWATER PERMIT: Minimum Requirements (MRs)

1. Preparation of Stormwater Site Plans
2. Construction SWPPP
3. Source Control
4. Preserve natural Drainage
5. On-Site Stormwater management
6. Run-off Treatment
7. Flow Control
8. Wetlands Protection
9. O&M

NPDES PERMIT LID O&M REQUIREMENTS: Minimum Requirements (MRs)

- MR #2 – Construction Stormwater Pollution Prevention Plan (SWPPP)
  - Protect LID BMPs from sediment and compaction
- MR #5 – On-site Stormwater Management
  - Infiltrate, disperse, and retain runoff on-site to the extent feasible
- MR #6 – Runoff Treatment
  - Water quality treatment for pollution-generating areas
- MR #7 – Flow Control
  - Control of flow peaks and flow durations
- MR#9 – O&M
  - Require an O&M manual for proposed stormwater facilities and BMPs
NPDES PERMIT LID O&M REQUIREMENTS: On-site Stormwater Management BMPs

• Used to help meet MR #5
• May be used to help meet MR #6 and/or MR #7
• “On-site Stormwater Management BMPs” = LID BMPs

DEFINITIONS

On-site SW Management BMPs (LID BMP)

• “Distributed stormwater management practices, integrated into a project design, that emphasize pre-disturbance hydrologic processes of infiltration, filtration, storage, evaporation and transpiration. LID BMPs include, but are not limited to, bioretention/rain gardens, permeable pavements, roof downspout controls, dispersion, soil quality and depth, vegetated roofs, minimum excavation foundations, and water re-use.”
DEFINITIONS

INTRODUCTION

Subset of On-site Stormwater Management BMPs used to meet MR #6 or MR #7 (may also be used to meet MR #5)

* Meets basic, enhanced and phosphorus treatment when infiltrating through soil per Ecology treatment requirements

β When permeable pavement is over soils meeting the suitability criteria or a treatment layer is included

1 Also considered SW Treatment & Flow Control BMPs/Facilities (MR #6 and/or MR #7) (additional requirements in regard to long term inspection, operations, and maintenance apply)

INTRODUCTION

*Phase I Only

INTRODUCTION

TOPICS

LID O&M GUIDANCE DOCUMENT: Objective

- Support permittees in implementing LID maintenance programs
- Provide specific O&M guidance so permittees can create maintenance standards that preserve facility function
- Note: Jurisdictions may want to tailor the tables in the O&M guidance document to address varying levels-of-service
LID O&M GUIDANCE DOCUMENT: Development

- Two advisory committees
  - LID Maintenance Advisory Committee
  - LID Maintenance Administrative Issues Advisory Committee
- Best available information
  - Advisory committee input
  - Literature review
  - Targeted surveys sent to jurisdictions, contractors/landscapers, and vendors
- Guidance will evolve over time

INTRODUCTION

LID O&M GUIDANCE DOCUMENT: Content

- Summary of NPDES Permit Requirements
  - Maintaining LID BMPs
    - Bioretention facilities
    - Rain gardens
    - Permeable pavement
    - Vegetated roofs
  - Programmatic & Administrative Guidance

- Downspout infiltration systems
- Downspout, sheet flow, and conc. dispersion systems
- Compost amended soils

INTRODUCTION

LID O&M GUIDANCE DOCUMENT: Content

- BMP description
  - How water moves through facility
- Key maintenance considerations to ensure facility function
  - Function by BMP component
  - Key maintenance by BMP component
- Key operations to preserve facility function

INTRODUCTION
LID O&M GUIDANCE DOCUMENT:
Skills and Staffing

• List of general skills required
• List of additional specialized skills
• Staffing survey estimates (e.g., crew hours per facility, per linear foot, or per square foot)

Skills Needed for Maintenance of Permeable Pavements
- Sweeper and equipment operation
- Commercial driver’s license (CDL)
- Landscaping skills e.g., general plant care for grass-filled open-cell grid systems
- Engineer and/or landscape architect for major maintenance

Photo provided by MIG SvR
TOPICS

• Types
• How the system works
• Maintenance considerations for facility function
• General maintenance for all
• Routine maintenance activities specific to each type
• Corrective maintenance activities
• Equipment and material recommendations
• Skills

TYPES & TERMS

- Pervious Concrete
- Porous Asphalt
- Permeable Interlocking Concrete Pavers
- Open Celled Systems (Flexible & Rigid)

Photos provided by MIG SvR
### TYPES: Porous Asphalt

- Flexible, non-proprietary
- Placement is similar to conventional asphalt but need large quantity
- Typically used for parking and light traffic loads; however, has been used for medium and heavy applications
- Initial infiltration rate: 200+ inches/hour

### TYPES: Pervious Concrete

- Rigid, non-proprietary
- Placement differs from conventional. Small batches feasible.
- 3/8" typical (round or crushed) aggregate w/o to minimal fines. Admixtures (optional) to increase workability and strength.
- Initial Infiltration rate 200+ inches/hour

### TYPES: Permeable Interlocking Pavers

- Flexible, proprietary
- Capable of high vehicle loads. Used for lower speeds
- High-density concrete that interlock and transfer vertical loads to surrounding pavers
- Clean aggregate (w/0 fines) filled within the openings/gaps
- Initial infiltration rates can vary depending upon paver type
PERMEABLE PAVEMENT O&M

TYPES: Plastic Grids

- Flexible, proprietary
- Plastic grid filled with clean gravel (w/o fines) or soil and planted with grass
- Trails, paths, maintenance access in a park, parking
- Highest percent voids

HOW THE FACILITY WORKS

- Sections vary – check as-builts
  - Top Wearing Course
  - Leveling Course?
  - Sub-base (storage)
  - Water quality treatment layer?
  - Geotextile?
  - Native soil
  - Storage within Sub-base
  - Slope conditions – check dams
  - Overflow (pipe or structure)
INTRODUCTION TO MAINTENANCE

• “The maintenance of LID facilities is essential to ensure that design stormwater management and other benefits continue over the full lifecycle of the installation.”
• What to look for?
  • Drainage Function
  • Safety
  • Aesthetics
• Is it different?
  • Long term infiltration capacity can remain high however...........

O&M TRANSITION

• O&M starts at the Planning phase
• Transitioning from Construction to O&M
  • Purpose?
  • What are the regulatory reporting requirements?
  • Record/As-built?
  • Training new staff
  • Mapping

Photos provided by MIG SvR
Inform crews about protecting permeable pavements
Use tarps/covers on stockpiles

GENERAL: Protection of Surface

GENERAL: Adjacent Stabilization
Maintain stabilization of adjacent areas to protect from sediment transport

• Proactive vs. reactive
• Address the source

GENERAL: Vegetation Migration & Rooting

• Ground Cover Migration
• Cover if hydroseeding/landscaping
• Options for Maintenance
  • Modify planting plan and remove invasive plants
  • Maintain adjacent landscaping

(Ground cover migration happens even with conventional pavement)
GENERAL: Moss Growth

• Be careful with expectations
• Moss is present regardless of pavement type in PNW
• More prevalent in shady areas and under trees
• Monitor
• Remove if observed to affect drainage and impacts safety
• Some is okay
• Perception on Aesthetics can vary

If severe, options for removal:
• Pressure washing (concrete)
• Weed burner
• Sweeping (during dry periods)
• Vacuuming (effectiveness varies)
• During planning & design, consider impacts of shade to maintenance frequency

Installed ~10 years ago
12316 NE 90th Street

Photos provided by MIG SvR
PERMEABLE PAVEMENT O&M

GENERAL: Moss Growth

- Photos provided by MIG SvR.

PERMEABLE PAVEMENT O&M

GENERAL: Protection From Staining

- Applies to pavers, asphalt, cement concrete. Same as conventional pavements.
- During construction, keeping pervious concrete covered for curing & protection can lead to some discoloration but fades with time.
- Avoid placement of organic/compost material on pavement.

PERMEABLE PAVEMENT O&M

GENERAL: Snow Removal

- Modify snow management procedures.
- Avoid sanding since it will clog the system, except in cases of emergencies/ safety issues. (vacuum sediment as soon as possible after melt)
- Avoid sanding adjacent streets since tires will track it onto the porous pavement.
- Avoid stockpiling snow on porous pavement.

Photos provided by MIG SvR.
PERMEABLE PAVEMENT O&M

GENERAL: Snow Removal

• Adjust snow plow height to avoid scratching
• UNH reported up to 75% decrease in salt use but it will depend on site conditions (shade, location etc)
• Permeable sub-base provides drainage
• Voids in wearing course provides space for freeze thaw
• Installed in cold climates such as Iowa, Pennsylvania, Colorado, Ohio, Lake Tahoe

Statewide LD Training Program  ADVANCED TOPICS FOR LONG-TERM LD OPERATIONS 78

GENERAL: Snow Removal

Parking Lot, Denver, CO – Next AM Following 12" Snow

Pervious Concrete  Conventional Asphalt

Photos courtesy of National Ready Mixed Concrete Association and slide courtesy of Center for Portland Cement Concrete Pavement Technology, 2005 via John Kevern at National Concrete Pavement Technology, Iowa State University

Statewide LD Training Program  ADVANCED TOPICS FOR LONG-TERM LD OPERATIONS 79

PERMEABLE PAVEMENT O&M

GENERAL: Drainage Function Inspection

• Inspect drainage function in the rain and identify areas for maintenance
  • Is there runoff from the surface?
  • Is water still ponding on the surface 1 hour after rain has stopped?
  • Is there ponding water in the observation port 24 hours after the rain has stopped?
• If ponding, then corrective action required for cleaning surface.

Statewide LD Training Program  ADVANCED TOPICS FOR LONG-TERM LD OPERATIONS 79
GENERAL: Drainage Function Inspection

- Video/photos of overall area during rain event
- If no ponding on the surface then it's flowing through top wearing course

Video provided by MIG SVR

Video provided by MIG SVR
PERMEABLE PAVEMENT O&M
GENERAL: Drainage Function Inspection
• Inspect drainage function in dry weather
  • Cylinder test: ASTM C1701 results indicate an infiltration rate of 10 inches per hour or less then corrective action required.
  • Test the surface infiltration rate using ASTM C1701 (perform 1 test/installation but not < 1 test/2,500 sf)
  • Run cylinder tests over multiple areas
  • Turn on sprinklers/garden hose to test larger area?
  • Does water pool or drain out?

GENERAL: Corrective Action for Drainage
• If not draining through top wearing course then corrective maintenance options include:
  • Pressure wash and/or vacuum system
  • Hand held pressure wash or power wash with rotating brushes
  • Pure vacuum sweeper (calibrated to not dislodge wearing course aggregate)
  • Gravel grid and pavers – removing and replacing aggregate

GENERAL: Under- and Elevated-Drains
• Under-drain/Elevated drain is clogged:
  • Jet clean or rotary cut debris/roots from under-drain
  • Clean flow restrictor/orifice
  • Identify the source of the blockage and take actions to prevent future blockages
  • If pipe daylights, check for erosion damage at discharge point:
    • Identify source of problem
    • Repair erosion and stabilize surface
PERMEABLE PAVEMENT O&M

GENERAL: Under- and Elevated- Drains

- Water remains in storage aggregate longer than anticipated:
  - Inspect standpipes for under-drain
  - Inspect drains
  - If structural problems possible schedule investigation of subsurface materials or other potential causes of extended ponding

PERMEABLE PAVEMENT O&M

GENERAL: Inspect Overflow/Backup System

- Check overflow drainage path
  - What is the flow path if water does not infiltrate?
  - If has under-drain pipes, verify they are draining
  - Verify that the overflow structure is not plugged.

PERMEABLE PAVEMENT O&M

GENERAL NON-ROUTINE: Utility Cuts

- Temporary Patch
  - Protect adjacent porous to remain
  - Permanent Panel replacement
  - Permanent Restoration: Use same material as original, except use conventional asphalt for porous asphalt
PERMEABLE PAVEMENT O&M

ROUTINE AND CORRECTIVE MAINTENANCE
BY COMPONENT

• Pavement surface
  • Porous Asphalt and Pervious Concrete
  • Permeable Interlocking Concrete Pavers
  • Open Celled Gravel grid
  • Open Celled Grass grid

ROUTINE: Porous Asphalt & Pervious Concrete

• Cleaning surface debris
  • Large areas: vacuum sweep (regenerative air or high efficiency vacuum)
  • Small areas: walk behind vacuums, shop vacs, hand held pressure washer or power washer with rotating brushes
  • Frequency: 1-2 times annually or as determined by site conditions
  • Consult with equipment manufacturer/rep for optimum operation

• No Overlay
• No black topping/sealing
• May need to re stripe parking lot more frequently

Photos provided by MIG SvR
**PERMEABLE PAVEMENT O&M**

**NON-ROUTINE: Pervious Concrete Structural**
- Major cracks or trip hazards and concrete spalling and raveling
- Determine cause
- Replace panel with porous material if feasible
- Modify operations?

**NON-ROUTINE: Raveling at Construction Joints**
- Consult with industry, engineer
- Patch?
- Cut out and replace with new panel (pervious concrete)
- Replace with conventional asphalt?

**NON-ROUTINE: Drainage Function Rehabilitation**
- Consult with industry, engineer
- Significant decline in infiltration when system is not routinely maintained

Photos provided by MIG SvR
**PERMEABLE PAVEMENT O&M**

**ROUTINE: PICP & Pavers**

- **Routine maintenance (cleaning surface debris)**
  - Large areas: vacuum sweep (regenerative air or high efficiency vacuum)
  - Small areas: walk behind vacuums, shop vacs
  - Frequency: 1-2 times annually or as determined by site conditions
  - Consult with equipment manufacturer/rep for optimum operation
  - Vacuum settings may have to be adjusted to prevent excess uptake of aggregate from paver openings or joints
  - Vacuum surface openings in dry weather to remove dry, encrusted sediment

**ROUTINE: PICP & Pavers**

- **Routine maintenance (vegetation)**
  - Remove weeds if they start to affect drainage performance
  - Aesthetics
  - Do not use herbicides (this is a stormwater facility)
  - Weed burner
  - Vinegar? (small applications)
  - Larger gaps between pavers easier for removal of weeds (shovel)

**CORRECTIVE: PICP & Pavers**

- **Clogged wearing course**
  - Review overall performance of the facility
  - If water ponds or flows off pavement surface during rain event, corrective maintenance or testing is needed
  - Dry Weather: Test the surface infiltration rate using ASTM C1781 (perform 1 test/installation but not < 1 test/2,500 sf)
PERMEABLE PAVEMENT O&M

CORRECTIVE: PICP & Pavers

• Clogged wearing course

  • Corrective maintenance options include:
    • Pure vacuum sweeper
    • Pressure wash and vacuum system calibrated to remove all visible sediment (likely 2-3 cm of aggregate) in the joints or infiltration cells
    • Replace aggregate in joints or infiltration cells per manufacturer specifications

NON-ROUTINE: PICP & Pavers

• Utility work

  • Pavers can be removed individually and replaced after work is complete
  • Clean sub-base material (no to minimal fines)

• Structural integrity

  • Loss of aggregate material between paver blocks: Refill per manufacturer’s recommendations
  • Paver block missing or damaged: Remove individual damaged paver blocks by hand and replace or repair per manufacturer’s recommendations
  • Surface settling: May require resetting
PERMEABLE PAVEMENT O&M

NON-Routine: PICP & Pavers
- Structural integrity and snow
  - The structure of the top edge of the paver blocks reduces chipping from snowplows
  - Skids on the corner of plow blades are recommended

PERMEABLE PAVEMENT O&M

Routine: Gravel Grid
- Cleaning surface debris
  - Large areas: vacuum sweep? (regenerative air or high efficiency vacuum)
  - Small areas: walk behind vacuums, shop vacs, rake, leaf blower
  - Frequency: 1-2 times annually or as determined by site conditions
  - Consult with equipment manufacturer/rep for optimum operation
  - Vacuum settings may have to be adjusted to prevent excess uptake of aggregate from paver openings or joints
  - Vacuum surface openings in dry weather to remove dry, encrusted sediment
  - Maintain aggregate 0.25 inches above grid structure

PERMEABLE PAVEMENT O&M

Corrective: Gravel Grid
- Clogged wearing course
  - Observe the pavement system after a rain event (testing infiltration rate using ASTM C1701 likely not applicable)
  - Corrective action needed, if ponding on surface or water flows off aggregate surface during rain event
CORRECTIVE: Gravel Grid

- Clogged wearing course
  - Use vacuum system calibrated to remove all visible sediment (likely 2-3 cm of aggregate)
  - Replace aggregate per manufacturer specifications (usually 0.25 inches above grid structure)

NON-ROUTINE: Gravel Grid

- Structural integrity
  - Grid damaged:
    - Remove pins (if present), pry up grid segments, and replace grid, pins and gravel
    - Replace grid segments where three or more adjacent rings are broken or damaged
  - Loss of aggregate material: Refill per manufacturer's recommendations (usually 0.25 inches above grid structure)

ROUTINE: Grass Grid

- Cleaning surface debris
  - Large and small areas: rakes, leaf blowers
  - Consult manufacturer guidelines
  - Frequency: 1-2 times annually or as determined by site conditions
  - Maintain soil/sand slightly below grid structure
CORRECTIVE: Grass Grid

- Clogged wearing course
  - Observe the grass pavement system after a rain event (testing infiltration rate using ASTM C1071 likely not applicable)
  - Corrective action needed if ponding on surface or water flows off grass surface during rain event
  - Follow manufacturer’s guidelines for repairing surface

NON-ROUTINE: Grass Grid

- Structural integrity
  - Grid damaged:
    - Remove pins (if present), pry up grid segments, and replace grid, pins and grass.
    - Replace grid segments where 3 or more adjacent rings are broken or damaged
  - Grass growth:
    - Mulch mower
    - Top dress with 0.5 inches of compost if nutrient deficient (do not use fertilizer)
  - Surface settling: May require resetting

NON-ROUTINE: Grass Grid

- Structural integrity
  - Poor grass coverage:
    - Restore growing medium, reseed or plant and/or amend vegetated area as needed
    - Traffic loading may be inhibiting grass growth, reconsider traffic loading if feasible
    - Growing media elevation should be maintained slightly below grid structure
    - Consult manufacturer/sales representative
    - May need occasional reseeding
NON-Routine: Grid Systems

- Structural integrity and snow
- Snow plows should use skids to elevate the blades to prevent loss of aggregate and damage to the grid.

Fire lane/Maintenance road for housing site. Geoweb® Cellular Confinement system adjacent to walk.

PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS

- Hand held pressure washer or power washer with rotating brushes
- Walk-behind vacuum
- Pure vacuum sweeper
- Brush broom
- Combined higher pressure wash and vacuum system

EQUIPMENT & MATERIALS: Routine Maintenance

Equipment to address clogging of wearing course, such as:

- Hand held pressure washer or power washer with rotating brushes
- Walk-behind vacuum
- Pure vacuum sweeper
- Brush broom
- Combined higher pressure wash and vacuum system
**PERMEABLE PAVEMENT O&M**

**EQUIPMENT & MATERIALS: Routine Maintenance**

Equipment to remove sediment, debris, and leaf litter, such as:

- High efficiency regenerative air or vacuum sweeper
- Push broom
- Brush broom
- Leaf blower

**EQUIPMENT & MATERIALS:**

Routine Maintenance

Weed/vegetation removal equipment, such as:

- Weeding tools
- Weed burner
- Edging and trimming equipment control groundcover and other vegetation

**EQUIPMENT & MATERIALS:**

Routine Maintenance

Additional equipment for grass-filled open-celled grid systems, such as:

- Mower or mulch mower
- Topdress grass seed
- Compost
- Replacement grid segments
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Routine Maintenance

Additional equipment for gravel-filled open-celled grid systems, such as:

- Rakes and shovels
- Replacement grid segments
- Replacement aggregate
- Wheelbarrow (for transporting replacement aggregate)

EQUIPMENT & MATERIALS:
Routine Maintenance

Additional equipment for permeable paver systems, such as:

- Rakes and shovels
- Extra pavers and bedding material
- Replacement aggregate
- Wheelbarrow (for transporting replacement aggregate)

EQUIPMENT & MATERIALS:
Routine Maintenance

Snow removal equipment, such as:

- Plow with skids to prevent damage to permeable pavement
- Snow blower
**PERMEABLE PAVEMENT O&M**

**EQUIPMENT & MATERIALS: Routine Maintenance**

Pipe/structure inspection and maintenance equipment:

- Hand tools
- Wrench or manhole opener
- Flashlight
- Mirror
- Garden hose
- Plumbing snake
- Measuring tape or ruler

**EQUIPMENT & MATERIALS: Corrective Maintenance**

- Elgin's Whirlwind (pure vacuum sweeper)
- Bunyan B.I.R.D. vacuum attached to vactor truck (10 gpm): $7,800 + power if not on vactor
- Paragon Industries
- Stay tuned … supply and demand affect technology
PERMEABLE PAVEMENT O&M
EQUIPMENT & MATERIALS:

Video of the B.I.R.D. with vactor truck

PERMEABLE PAVEMENT O&M
EQUIPMENT & MATERIALS: Corrective Maintenance

PERMEABLE PAVEMENT O&M
EQUIPMENT & MATERIALS: Corrective Maintenance
Erosion control equipment:
- Erosion control matting
- Rocks
- Mulch
- Plants
- Landscaping tools
- Tarps (to protect pavement)

2006 Study Findings:
- Leaf/Litter vacuums are more effective than sweepers with dust control vacuum systems
- Vacuum machines had difficulty removing leaf piles when they were more than 2 to 3 inches thick

N Gay Avenue & Westmoreland Projects:
- Pavers, porous asphalt and pervious concrete public streets
- 1X to 2X/year - Vacuum sweepers used to collect fines:
  - Tymco’s 500x, Schwarze’s A7000, Elgin’s Crosswind J-Plus
  - Infiltration testing with flusher truck
  - “Vegetation growth in pavers did not appear to hinder infiltration on Rex St.” (~63 in/hr)
PERMEABLE PAVEMENT O&M

SKILLS

• Sweeper and equipment operation
• Commercial driver’s license (CDL)
• Landscaping skills (e.g., general plant care) for grass-filled open-celled grid systems
• Engineer and/or landscape architect for major maintenance

ADMINISTRATIVE TOOLS

TOPICS

• Inspection checklist
• Record keeping and tracking
• Interpreting plans and as-builts
• Inspection programs

INSPECTION CHECKLIST

Name(s) of inspector: ________________________________
Date of inspection: ________________________________
Location of the permeable pavement facility: ___________
Surface/wearing course type: __________________________
Address or intersection: ______________________________
Age of permeable pavement facility: ____________________
Permeable pavement facility area (ft. x ft.): ____________
Time since last rainfall (hrs): ____________
Quantity of last rainfall (in): ____________

Site Sketch (include curbs, islands, trees, north arrow, etc.)
ADMINISTRATIVE TOOLS

INSPECTION CHECKLIST

Based on visual assessment of the site, answer the following questions and take photographs of the site:

Surface/Wearing Course
1. Are there indications of any of the following on the surface of the permeable pavement facility? (If yes, mark on site sketch)
   - Exceptional sediment
   - moss growth
   - Cracks, trip hazards, or concrete asphalt spalling
   - Trash and debris
   - Leaf accumulation
   - Settlement of surface
   - Other:

2. Is there ponding on the surface of the permeable pavement? [ ] Yes [ ] No
   If yes, describe the potential reasons for ponded water below (leaf and debris build-up, non-functional underdrain, groundwater input, illicit connection, inadequate capacity in facility, etc.)

Notes:

ADMINISTRATIVE TOOLS

INSPECTION CHECKLIST

Inlets/Outlets/Pipes:
3. How many inlet pipes are present? [ ] 0 [ ] 1 [ ] 2 [ ] 3 [ ] 4 [ ] 5 [ ] > 5
4. Are any of the inlet pipes clogged? (If yes, mark the location on your site sketch and fill in the boxes below with the cause of the clogging (e.g., debris, sediment, vegetation, etc.) [ ] No [ ] Partially [ ] Completely [ ] NA
5. Are any of the inlet pipes altered from the original design or otherwise in need of maintenance? (If yes, write in reason: frost heave, vandalism, unknown, etc.)

<table>
<thead>
<tr>
<th>Inlet #</th>
<th>Inlet #</th>
<th>Inlet #</th>
<th>Inlet #</th>
<th>Inlet #</th>
</tr>
</thead>
<tbody>
<tr>
<td>Partially clogged</td>
<td>Partially clogged</td>
<td>Reason for maintenance</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Observation Port (if present):
7. Is water remaining in the storage aggregate larger than anticipated by design after the end of a storm?
   [ ] Yes [ ] No [ ] Unknown
   If yes, identify potential cause of extended ponding and mark the location of observed extended ponding on your site sketch.
ADMINISTRATIVE TOOLS
INSPECTION CHECKLIST

1. Inspector’s Recommendations. When is maintenance needed?
   □ Immediately
   □ Within a month or two
   □ Within a year
   □ No sign that any maintenance is required

2. Summarize the results of this inspection and write any other observations in the box below.
   summary and other observations

ADMINISTRATIVE TOOLS
RECORD KEEPING & TRACKING

- Parcel information
- City/County permit (ROW and/or building permit)
- Relevant sections of the Stormwater Site Plan
- “As-builts” or “record drawings” (individual lots and public ROW)
- Legal agreements (covenants, easements)

- Location information (GPS data, digital maps)
- Project O&M manual (where applicable)
- Maintenance logs (typically included in a Project O&M Manual)
- Inspection forms
- Enforcement documents
ADMINISTRATIVE TOOLS

INTERPRETING PLANS & AS-BUILTS

• How to interpret construction plans, installation photos, and as-builts

ADMINISTRATIVE TOOLS

INSPECTION PROGRAMS

• Immediately post-construction for all LID BMPs - installed per plan and functioning properly

• Every 6 months (until 90% of lots are constructed) for permanent Stormwater Treatment and Flow Control BMPs/Facilities in new residential developments - identify maintenance needs and enforce maintenance standards

• Ongoing annual inspections for all Stormwater Treatment and Flow Control BMPs/Facilities (MR #6 and/or MR #7)
