Statewide LID Training Program
INSTRUCTORS

Curtis Hinman  
Senior Scientist  
Key project experience: Research specialist in the performance and design of LID practices.

KATHY GWILYM, PE  
Senior Civil Engineer  
Key project experience: Complete street design, LID and permeable pavements for public works and private projects.
• 2012: Public and private partners engage state legislature to fund program

• June 2012: LID Training Steering Committee convened

• 2014: Training program built from state LID Training Plan
### Statewide LID Training Program

#### ADDITIONAL TRAINING SUPPORT

- CH2M HILL
- STORMWATER
- SVR
- KINDRED HYDRO
- MITHUN
- MUTUAL MATERIALS
- LEAPING FROG FILMS
- ASSOCIATED EARTH SCIENCES INCORPORATED
- STORMWATER ONE
Statewide LID Training Program

PROGRAM OVERVIEW

• Implement first phase of trainings (September 2014 through May 2015)
• 49 trainings offered in western and eastern WA first year
• 45 trainings scheduled for western and eastern WA in current phase (through June 2016)
• Three levels: Introductory, Intermediate, and Advanced
• Statewide LID Certificate now available
# Statewide LID Training Program

**5.7 Advanced Topics in LID Design: Bioretention Media and Compost Amended Soils**
LOGISTICS

SCHEDULE
• Classroom training (8:30-11:45)
• 1-hour lunch break (11:45-12:45)
• Classroom training (12:45-1:30)
• Field exercises (1:30-3:30)

OTHER LOGISTICS
• Restroom location
• Food
• Turn off cell phones
• Sign in and sign out
LEARNING OBJECTIVES

1. Understand the structure and function of permeable pavement components.

2. Gain an in-depth understanding of the primary inspection activities and tools to maintain permeable pavement function over time.

3. Know the primary maintenance requirements for permeable pavement.

4. Identify maintenance problems and associated solutions necessary for long-term function of permeable pavement areas.

PERMEABLE PAVEMENT

ADVANCED TOPICS FOR LONG-TERM LID OPERATIONS
LOW IMPACT DEVELOPMENT (LID): Introduction to Principles

- Site design & planning techniques emphasizing conservation
- Use of small-scale engineered controls to closely mimic pre-development hydrologic processes
- Careful assessment of site soils and strategic site planning to best use those soils for stormwater management
LID: Introduction to Principles: Pre-developed Forest Hydrology

INTRODUCTION
LID: Introduction to Principles: Developed Condition Hydrology

2012 LID Technical Guidance Manual for Puget Sound
LID: Site Design and Planning Techniques

- Minimize disturbance
- Reduce impervious surface
- Protect and restore native soils and vegetation
- Manage stormwater close to the source

**Traditional**

**LID**
INTRODUCTION

LID: Small-Scale Engineering Controls

• Infiltration
• Filtration
• Storage
• Evaporation
• Transpiration

Synonyms for LID BMPs:

Green Stormwater Infrastructure (GSI), Integrated Management Practices (IMPs), and On-Site Stormwater Management BMPs

Conserve or regain pre-developed hydrologic functions
LID: Best Management Practices (BMPs)

- Rain Gardens (BMP T5.14A)
- Bioretention (BMP T5.14B)
- Permeable Pavement (BMP T5.15)
- Vegetated Roofs (BMP T5.17)
- Downspout Full Infiltration (BMP T5.10A)
- Downspout Dispersion (BMP T5.10B)
- Concentrated Flow Dispersion (BMP T5.11)
- Sheet Flow Dispersion (BMP T5.12)
- Compost Amended Soils (BMP T5.13)

INTRODUCTION

NPDES PERMIT LID O&M REQUIREMENTS:
Requirements Vary By BMP Classification

• On-site Stormwater Management BMPs

• Stormwater Treatment and Flow Control BMPs/Facilities
INTRODUCTION

NPDES MUNICIPAL STORMWATER PERMIT: Minimum Requirements (MRs)

1. Preparation of Stormwater Site Plans
2. Construction SWPPP
3. Source Control
4. Preserve natural Drainage
5. On-Site Stormwater management
6. Run-off Treatment
7. Flow Control
8. Wetlands Protection
9. O&M
INTRODUCTION

NPDES PERMIT LID O&M REQUIREMENTS:
Minimum Requirements (MRs)

• MR #2 – Construction Stormwater Pollution Prevention Plan (SWPPP)
  • Protect LID BMPs from sediment and compaction

• MR #5 – On-site Stormwater Management
  • Infiltrate, disperse, and retain runoff on-site to the extent feasible

Lotus Springs
INTRODUCTION

NPDES PERMIT LID O&M REQUIREMENTS: Minimum Requirements (MRs)

• **MR #6 – Runoff Treatment**  
  • Water quality treatment for pollution-generating areas

• **MR #7 – Flow Control**  
  • Control of flow peaks and flow durations

• **MR#9 – O&M**  
  • Require an O&M manual for proposed stormwater facilities and BMPs
NPDES PERMIT LID O&M REQUIREMENTS:
On-site Stormwater Management BMPs

- Used to help meet MR #5
- May be used to help meet MR #6 and/or MR #7
- “On-site Stormwater Management BMPs” = LID BMPs
NPDES PERMIT LID O&M REQUIREMENTS:
On-site Stormwater Management BMPs

- Includes the following LID BMPs:
  - Rain Gardens (BMP T5.14A)
  - Bioretention (BMP T5.14B)
  - Permeable Pavement (BMP T5.15)
  - Vegetated Roofs (BMP T5.17)
  - Downspout Full Infiltration (BMP T5.10A)
  - Downspout Dispersion (BMP T5.10B)
  - Concentrated Flow Dispersion (BMP T5.11)
  - Sheet Flow Dispersion (BMP T5.12)
  - Compost Amended Soils (BMP T5.13)
INTRODUCTION

DEFINITIONS

On-site SW Management BMPs (LID BMP)

• “Distributed stormwater management practices, integrated into a project design, that emphasize pre-disturbance hydrologic processes of infiltration, filtration, storage, evaporation and transpiration. LID BMPs include, but are not limited to, bioretention/rain gardens, permeable pavements, roof downspout controls, dispersion, soil quality and depth, vegetated roofs, minimum excavation foundations, and water re-use.”
DEFINITIONS

• SW Treatment & Flow Control BMPs/Facilities (MR #6 and/or MR #7)
  • “Detention facilities, treatment BMPs/facilities, bioretention, vegetated roofs, and permeable pavements that help meet Appendix 1 Minimum Requirements #6 (treatment), #7 (flow control), or both”
INTRODUCTION

DEFINITIONS

Subset of On-site Stormwater Management BMPs used to meet MR #6 or MR #7 (may also be used to meet MR #5)

5.4 PERMEABLE PAVEMENT

ADVANCED TOPICS FOR LONG-TERM LID OPERATIONS
INTRODUCTION

LID O&M GUIDANCE DOCUMENT: Objective

- Support permittees in implementing LID maintenance programs
- Provide specific O&M guidance so permittees can create maintenance standards that preserve facility function
- Note: Jurisdictions may want to tailor the tables in the O&M guidance document to address varying levels-of-service
LID O&M GUIDANCE DOCUMENT: Development

- Two advisory committees
  - LID Maintenance Advisory Committee
  - LID Maintenance Administrative Issues Advisory Committee
- Best available information
  - Advisory committee input
  - Literature review
  - Targeted surveys sent to jurisdictions, contractors/landscapers, and vendors
- Guidance will evolve over time
LID O&M GUIDANCE DOCUMENT: Content

• Summary of NPDES Permit Requirements

• Maintaining LID BMPs
  • Bioretention facilities
  • Rain gardens
  • Permeable pavement
  • Vegetated roofs
  • Downspout infiltration systems
  • Downspout, sheet flow, and conc. dispersion systems
  • Compost amended soils

• Programmatic & Administrative Guidance
INTRODUCTION

LID O&M GUIDANCE DOCUMENT: Content

• BMP description
  • How water moves through facility

• Key maintenance considerations to ensure facility function
  • Function by BMP component
  • Key maintenance by BMP component

• Key operations to preserve facility function

LID O&M GUIDANCE DOCUMENT:
Skills and Staffing

- List of general skills required
- List of additional specialized skills
- Staffing survey estimates (e.g., crew hours per facility, per linear foot, or per square foot)

Skills Needed for Maintenance of Permeable Pavement

- Sweeper and equipment operation
- Commercial driver’s license (CDL)
- Landscaping skills (e.g., general plant care) for grass-filled open-celled grid systems
- Engineer and/or landscape architect for major maintenance

Photo provided by MIG SvR
introduction

2 permeable pavement O&M

3 O&M costs

4 administrative tools

5 wrap up & field exercises
PERMEABLE PAVEMENT O&M TOPICS

- Types
- How the system works
- Maintenance considerations for facility function
- General maintenance for all
- Routine maintenance activities specific to each type
- Corrective maintenance activities
- Equipment and material recommendations
- Skills
PERMEABLE PAVEMENT O&M

TYPES & TERMS

Pervious Concrete

Porous Asphalt

Permeable Interlocking Concrete Pavers

Open Celled Systems (Flexible & Rigid)

Photos provided by MIG SvR
PERMEABLE PAVEMENT O&M

TYPES: Porous Asphalt

- Flexible, non-proprietary
- Placement is similar to conventional asphalt but need large quantity
- Typically used for parking and light traffic loads; however, has been used for medium and heavy applications
- Initial Infiltration rate: 200+ inches/hour
**PERMEABLE PAVEMENT O&M**

**TYPES: Pervious Concrete**

- Rigid, non-proprietary
- Placement differs from conventional. Small batches feasible.
- 3/8” typical (round or crushed) aggregate w/o to minimal fines. Admixtures (optional) to increase workability and strength.
- Initial Infiltration rate 200+ inches/hour
PERMEABLE PAVEMENT O&M

TYPES: Permeable Interlocking Pavers

- Flexible, proprietary
- Capable of high vehicle loads. Used for lower speeds
- High-density concrete that interlock and transfer vertical loads to surrounding pavers
- Clean aggregate (w/o fines) filled within the openings/gaps
- Initial infiltration rates can vary depending upon paver type
PERMEABLE PAVEMENT O&M

TYPES: Plastic Grids

- Flexible, proprietary
- Plastic grid filled with clean gravel (w/o fines) or soil and planted with grass
- Trails, paths, maintenance access in a park, parking
- Highest percent voids
PERMEABLE PAVEMENT O&M

HOW THE FACILITY WORKS

Figure 6.3.9
The aggregate median provides a connection and overflow protection from the pavement surface to the aggregate base. (Source: Adapted from Cahill)

Statewide LID Training Program
Department of Ecology
State of Washington

ADVANCED TOPICS FOR LONG-TERM LID OPERATIONS

5.4 PERMEABLE PAVEMENT
PERMEABLE PAVEMENT O&M

HOW THE FACILITY WORKS

- Sections vary – check as-builts
  - Top Wearing Course
  - Leveling Course?
  - Sub-base (storage)
  - Water quality treatment layer?
  - Geotextile?
  - Native soil
- Storage within Sub-base
  - Slope conditions – check dams
- Overflow (pipe or structure)

Figures provided by MIG SvR
Break
INTRODUCTION TO MAINTENANCE

• “The maintenance of LID facilities is essential to ensure that design stormwater management and other benefits continue over the full lifecycle of the installation.”

• What to look for?
  • Drainage Function
  • Safety
  • Aesthetics

• Is it different?
• Long term infiltration capacity can remain high however..............
PERMEABLE PAVEMENT O&M

O&M TRANSITION

• O&M starts at the Planning phase

• Transitioning from Construction to O&M
  • Purpose?
  • What are the regulatory reporting requirements?
  • Record/As-built?
  • Training new staff
  • Mapping

Photos provided by MIG SvR
Inform crews about protecting permeable pavements

Use tarps/cover under stockpiles

Photos provided by MIG SvR
GENERAL: Adjacent Stabilization

Maintain stabilization of adjacent areas to protect from sediment transport

- Proactive vs. reactive
- Address the source

Photos provided by MIG SvR
GENERAL: Vegetation Migration & Rooting

- Ground Cover Migration
- Cover if Hydroseeding/Landscaping
- Options for Maintenance
  - Modify planting plan and remove invasive plants
  - Maintain adjacent landscaping

Ground cover migration happens even with conventional pavement

Photos provided by MIG SvR
PERMEABLE PAVEMENT O&M

GENERAL: Moss Growth

• Be careful with expectations

• Moss is present regardless of pavement type in PNW

• More prevalent in shady areas and under trees

• Monitor

• Remove if it is observed to affect drainage and impacts safety

• Some is okay

• Perception on Aesthetics can vary
PERMEABLE PAVEMENT O&M

GENERAL: Moss Growth

• If severe, options for removal:
  • Pressure washing (concrete)
  • Weed burner
  • Sweeping (during dry periods)
  • Vacuuming (effectiveness varies)

• During planning & design, consider impacts of shade to maintenance frequency

Photo provided by MIG SvR

Statewide LID Training Program

ADVANCED TOPICS FOR LONG-TERM LID OPERATIONS
PERMEABLE PAVEMENT O&M

GENERAL: Protection From Staining

• Applies to pavers, asphalt, cement concrete. Same as conventional pavements

• During construction, keeping pervious concrete covered for curing & protection can lead to some discoloration but fades with time

• Avoid placement of organic/compost material on pavement

Photos provided by MIG SvR
PERMEABLE PAVEMENT O&M

GENERAL: Snow Removal

- Modify snow management procedures
- Avoid sanding since it will clog the system, except in cases of emergencies/safety issues (vacuum sediment as soon as possible after melt)
- Avoid sanding adjacent streets since tires will track it onto the porous pavement
- Avoid stockpiling snow on porous pavement
PERMEABLE PAVEMENT O&M

GENERAL: Snow Removal

• Adjust snow plow height to avoid scratching

• UNH reported up to 75% decrease in salt use but it will depend on site conditions (shade, location etc)

• Permeable sub-base provides drainage

• Voids in wearing course provides space for freeze thaw

• Installed in cold climates such as Iowa, Pennsylvania, Colorado, Ohio, Lake Tahoe

Photo provided by MIG SvR
PERMEABLE PAVEMENT O&M

GENERAL: Snow Removal

Parking Lot, Denver, CO – Next AM Following 12” Snow

Pervious Concrete

Conventional Asphalt

PERMEABLE PAVEMENT O&M

GENERAL: Drainage Function Inspection

• Inspect drainage function in the rain and identify areas for maintenance
  • Is there runoff from the surface?
  • Is water still ponding on the surface 1 hour after rain has stopped?
  • Is there ponding water in the observation port 24 hours after the rain has stopped?
• If ponding, then corrective action required for cleaning surface.

Photo provided by MIG SvR

Statewide LID Training Program

ADVANCED TOPICS FOR LONG-TERM LID OPERATIONS
PERMEABLE PAVEMENT O&M

GENERAL: Drainage Function Inspection

- Video/photos of overall area during rain event
- If no ponding on the surface then its flowing through top wearing course

Photos provided by MIG SvR
PERMEABLE PAVEMENT O&M
VIDEO IN THE RAIN

Video provided by MIG SvR
PERMEABLE PAVEMENT O&M
VIDEO IN THE RAIN

Video provided by MIG SvR
PERMEABLE PAVEMENT O&M

GENERAL: Drainage Function Inspection

- **Inspect drainage function in dry weather**
  - Cylinder test: ASTM C1701 results indicate an infiltration rate of 10 inches per hour or less then corrective action required.
  - Test the surface infiltration rate using ASTM C1701 (perform 1 test/installation but not < 1 test/2,500 sf)
  - Run cylinder tests over multiple areas
  - Turn on sprinklers/garden hose to test larger area?
  - Does water pool or drain out?

Photos provided by MIG SvR
PERMEABLE PAVEMENT O&M

GENERAL: Corrective Action for Drainage

• If not draining through top wearing course then corrective maintenance options include:
  • Pressure wash and/or vacuum system
  • Hand held pressure wash or power wash with rotating brushes
  • Pure vacuum sweeper (calibrated to not dislodge wearing course aggregate)
  • Gravel grid and pavers – removing and replacing aggregate
PERMEABLE PAVEMENT O&M

GENERAL: Under- and Elevated-Drains

• Under-drain/Elevated drain is clogged:
  • Jet clean or rotary cut debris/roots from under-drain
  • Clean flow restrictor/orifice
  • Identify the source of the blockage and take actions to prevent future blockages

• If pipe daylights, check for erosion damage at discharge point:
  • Identify source of problem
  • Repair erosion and stabilize surface
PERMEABLE PAVEMENT O&M

GENERAL: Under- and Elevated- Drains

• Water remains in storage aggregate longer than anticipated:
  • Inspect standpipes for under-drain
  • Inspect drains
  • If structural problems possible schedule investigation of subsurface materials or other potential causes of extended ponding
PERMEABLE PAVEMENT O&M

GENERAL: Inspect Overflow/Backup System

• Check overflow drainage path
  • What is the flow path if water does not infiltrate?
  • If has under-drain pipes, verify they are draining
  • Verify that the overflow structure is not plugged.

Photos provided by MIG SvR
PERMEABLE PAVEMENT O&M

GENERAL NON-ROUTINE: Utility Cuts

• Temporary Patch
• Protect adjacent porous to remain
• Permanent Panel replacement
• Permanent Restoration: Use same material as original, except use conventional asphalt for porous asphalt
PERMEABLE PAVEMENT O&M
ROUTINE AND CORRECTIVE MAINTENANCE
BY COMPONENT

• Pavement surface
  • Porous Asphalt and Pervious Concrete
  • Permeable Interlocking Concrete Pavers
  • Open Celled Gravel grid
  • Open Celled Grass grid
ROUTINE: Porous Asphalt & Pervious Concrete

• Cleaning surface debris
  • Large areas: vacuum sweep (regenerative air or high efficiency vacuum)
  • Small areas: walk behind vacuums, shop vacs, hand held pressure washer or power washer with rotating brushes
  • Frequency: 1-2 times annually or as determined by site conditions
  • Consult with equipment manufacturer/rep for optimum operation
PERMEABLE PAVEMENT O&M

ROUTINE: Porous Asphalt & Pervious Concrete

- No Overlay
- No black topping/sealing
- May need to re stripe parking lot more frequently

Photos provided by MIG SvR
PERMEABLE PAVEMENT O&M

NON-ROUTINE: Pervious Concrete Structural

• Major cracks or trip hazards and concrete spalling and raveling

• Determine cause

• Replace panel with porous material if feasible

• Modify operations?

Photos provided by MIG SvR
PERMEABLE PAVEMENT O&M

NON-ROUTINE: Raveling at Construction Joints

- Consult with industry, engineer
- Patch?
- Cut out and replace with new panel (pervious concrete)
- Replace with conventional asphalt?

Photos provided by MIG SvR
PERMEABLE PAVEMENT O&M

NON-ROUTINE: Drainage Function Rehabilitation

- Consult with industry, engineer
- Significant decline in infiltration when system is not routinely maintained
PERMEABLE PAVEMENT O&M

ROUTINE: PICP & Pavers

- Routine maintenance (cleaning surface debris)
  - **Large areas:** vacuum sweep (regenerative air or high efficiency vacuum)
  - **Small areas:** walk behind vacuums, shop vacs
  - **Frequency:** 1-2 times annually or as determined by site conditions
  - Consult with equipment manufacturer/rep for optimum operation
  - Vacuum settings may have to be adjusted to prevent excess uptake of aggregate from paver openings or joints
  - Vacuum surface openings in dry weather to remove dry, encrusted sediment
PERMEABLE PAVEMENT O&M

ROUTINE: PICP & Pavers

• Routine maintenance (vegetation)
  • Remove weeds if they start to affect drainage performance
  • Aesthetics
  • Do not use herbicides (this is a stormwater facility)
  • Weed burner
  • Vinegar? (small applications)
  • Larger gaps between pavers easier for removal of weeds (shovel)

Photos provided by MIG SvR
CORRECTIVE: PICP & Pavers

- Clogged wearing course
  - Review overall performance of the facility
  - If water ponds or flows off pavement surface during rain event, corrective maintenance or testing is needed
  - Dry Weather: Test the surface infiltration rate using ASTM C1781 (perform 1 test/installation but not < 1 test/2,500 sf)
PERMEABLE PAVEMENT O&M

CORRECTIVE: PICP & Pavers

- Clogged wearing course
  - Corrective maintenance options include:
    - Pure vacuum sweeper
    - Pressure wash and vacuum system calibrated to remove all visible sediment (likely 2-3 cm of aggregate) in the joints or infiltration cells
  - Replace aggregate in joints or infiltration cells per manufacturer specifications

Photo provided by MIG SvR
PERMEABLE PAVEMENT O&M

NON-ROUTINE: PICP & Pavers

• Utility work
  • Pavers can be removed individually and replaced after work is complete
  • Clean sub-base material (no to minimal fines)
PERMEABLE PAVEMENT O&M

NON-ROUTINE: PICP & Pavers

• Structural integrity

  • Loss of aggregate material between paver blocks: Refill per manufacturer's recommendations

  • Paver block missing or damaged: Remove individual damaged paver blocks by hand and replace or repair per manufacturer’s recommendations

  • Surface settling: May require resetting
PERMEABLE PAVEMENT O&M

NON-ROUTINE: PICP & Pavers

• Structural integrity and snow
  • The structure of the top edge of the paver blocks reduces chipping from snowplows
  • Skids on the corner of plow blades are recommended
PERMEABLE PAVEMENT O&M

ROUTINE: Gravel Grid

- Cleaning surface debris
  - Large areas: vacuum sweep? (regenerative air or high efficiency vacuum)
  - Small areas: walk behind vacuums, shop vacs, rake, leaf blower
  - Frequency: 1-2 times annually or as determined by site conditions
  - Consult with equipment manufacturer/rep for optimum operation
  - Vacuum settings may have to be adjusted to prevent excess uptake of aggregate from paver openings or joints
  - Vacuum surface openings in dry weather to remove dry, encrusted sediment
  - Maintain aggregate 0.25 inches above grid structure
PERMEABLE PAVEMENT O&M

CORRECTIVE: Gravel Grid

- Clogged wearing course
  - Observe the pavement system after a rain event (testing infiltration rate using ASTM C1701 likely not applicable)
  - Corrective action needed, if ponding on surface or water flows off aggregate surface during rain event
PERMEABLE PAVEMENT O&M

CORRECTIVE: Gravel Grid

• Clogged wearing course
  • Use vacuum system calibrated to remove all visible sediment (likely 2-3 cm of aggregate)
  • Replace aggregate per manufacturer specifications (usually 0.25 inches above grid structure)
PERMEABLE PAVEMENT O&M

NON-ROUTINE: Gravel Grid

• Structural integrity
  • Grid damaged:
    • Remove pins (if present), pry up grid segments, and replace grid, pins and gravel
    • Replace grid segments where three or more adjacent rings are broken or damaged
  • Loss of aggregate material: Refill per manufacturer's recommendations (usually 0.25 inches above grid structure)
PERMEABLE PAVEMENT O&M

ROUTINE: Grass Grid

- Cleaning surface debris
  - Large and small areas: rakes, leaf blowers
  - Consult manufacturer guidelines
  - Frequency: 1-2 times annually or as determined by site conditions
  - Maintain soil/sand slightly below grid structure
PERMEABLE PAVEMENT O&M

CORRECTIVE: Grass Grid

• Clogged wearing course
  • Observe the grass pavement system after a rain event (testing infiltration rate using ASTM C1701 likely not applicable)
  • Corrective action needed if ponding on surface or water flows off grass surface during rain event
  • Follow manufacturer’s guidelines for repairing surface
PERMEABLE PAVEMENT O&M

NON-ROUTINE: Grass Grid

• Structural integrity

  • Grid damaged:
    • Remove pins (if present), pry up grid segments, and replace grid, pins and grass.
    • Replace grid segments where 3 or more adjacent rings are broken or damaged

• Grass growth:
  • Mulch mower
  • Top dress with 0.5 inches of compost if nutrient deficient (do not use fertilizer)

• Surface settling: May require resetting
PERMEABLE PAVEMENT O&M

NON-ROUTINE: Grass Grid

• Structural integrity
  • Poor grass coverage:
    • Restore growing medium, reseed or plant and/or amend vegetated area as needed
    • Traffic loading may be inhibiting grass growth; reconsider traffic loading if feasible
    • Growing media elevation should be maintained slightly below grid structure
    • Consult manufacturer/sales representative
    • May need occasional reseeding

Photo provided by MIG SvR
PERMEABLE PAVEMENT O&M

NON-ROUTINE: Grid Systems

• Structural integrity and snow
  • Snow plows should use skids to elevate the blades to prevent loss of aggregate and damage to the grid

Photo provided by MIG SVR

Fire lane/Maintenance road for housing site. Geoweb® Cellular Confinement system adjacent to walk
## Permeable Pavement Equipment and Materials

### Table 9. Permeable Pavement Equipment and Materials List

<table>
<thead>
<tr>
<th>Equipment to address clogging of wicking course, such as:</th>
<th>Additional equipment for gravel-filled open-graded grid systems</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Hand held pressure washer or power washer with rotating brushes (not recommended for open-graded aggregate-filled systems)</td>
<td>- Rakes and shovels</td>
</tr>
<tr>
<td>- Walk-behind vacuum (sidewalking)</td>
<td>- Extra powers and binding material</td>
</tr>
<tr>
<td>- Leaf blower</td>
<td>- Aggregate to replace material after vacuums and or replace material in high use areas</td>
</tr>

*Erosion control equipment to stabilize adjacent landscaped areas and protect pavement from sediment input.
**PERMEABLE PAVEMENT O&M**

**EQUIPMENT & MATERIALS:** Routine Maintenance

Equipment to address clogging of wearing course, such as:

- Hand held pressure washer or power washer with rotating brushes
- Walk-behind vacuum
- Pure vacuum sweeper
- Brush broom
- Combined higher pressure wash and vacuum system
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Routine Maintenance

Equipment to remove sediment, debris, and leaf litter, such as:

• High efficiency regenerative air or vacuum sweeper
• Push broom
• Brush broom
• Leaf blower
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Routine Maintenance

Weed/vegetation removal equipment, such as:

- Weeding tools
- Weed burner
- Edging and trimming equipment control groundcover and other vegetation)
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Routine Maintenance

Additional equipment for grass-filled open-celled grid systems, such as:

- Mower or mulch mower
- Topdress grass seed
- Compost
- Replacement grid segments
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Routine Maintenance

Additional equipment for gravel-filled open-celled grid systems, such as:

• Rakes and shovels
• Replacement grid segments
• Replacement aggregate
• Wheelbarrow (for transporting replacement aggregate)
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Routine Maintenance

Additional equipment for permeable paver systems, such as:

- Rakes and shovels
- Extra pavers and bedding material
- Replacement aggregate
- Wheelbarrow (for transporting replacement aggregate)
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Routine Maintenance

Snow removal equipment, such as:

• Plow with skids to prevent damage to permeable pavement

• Snow blower
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Routine Maintenance

Pipe/structure inspection and maintenance equipment:

- Hand tools
- Wrench or manhole opener
- Flashlight
- Mirror
- Garden hose
- Plumbing snake
- Measuring tape or ruler
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Corrective Maintenance

- Elgin’s Whirlwind (pure vacuum sweeper)
- Bunyan B.I.R.D. vacuum attached to vactor truck (10 gpm): $7,800 + power if not on vactor
- Paragon Industries
- Stay tuned ... supply and demand affect technology
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Corrective Maintenance

EQUIPMENT & MATERIALS: Corrective Maintenance
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: Corrective Maintenance

Erosion control equipment:

- Erosion control matting
- Rocks
- Mulch
- Plants
- Landscaping tools
- Tarps (to protect pavement)

Photo provided by MIG SvR
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: City of Olympia

2006 Study Findings:

- Leaf/Litter vacuums are more effective than sweepers with dust control vacuum systems
- Vacuum machines had difficulty removing leaf piles when they were more than 2 to 3 inches thick
PERMEABLE PAVEMENT O&M

EQUIPMENT & MATERIALS: City of Portland

N Gay Avenue & Westmoreland Projects:

• Pavers, porous asphalt and pervious concrete public streets

• 1X to 2X/year - Vacuum sweepers used to collect fines:
  • Tymco’s 500x, Schwarze’s A7000, Elgin’s Crosswind J-Plus

• Infiltration testing with flusher truck

• “Vegetation growth in pavers did not appear to hinder infiltration on Rex St.” (~63 in/hr)
PERMEABLE PAVEMENT O&M

SKILLS

• Sweeper and equipment operation
• Commercial driver’s license (CDL)
• Landscaping skills (e.g., general plant care) for grass-filled open-celled grid systems
• Engineer and/or landscape architect for major maintenance

INSPECTION CHECKLIST

Name(s) of inspectors: ________________________________
Date of inspection: ________________________________
Location of the permeable pavement facility: ____________
Surface/wearing course type: __________________________
Address or intersection: ______________________________
Age of permeable pavement facility: ____________________
Permeable pavement facility area (ft. x ft.): ____________
Time since last rainfall (hr): __________________________
Quantity of last rainfall (in): __________________________

Site Sketch (include curbs, islands, trees, north arrow, etc.)
ADMINISTRATIVE TOOLS

INSPECTION CHECKLIST

Based on visual assessment of the site, answer the following questions and take photographs of the site:

Surface/Wearing Course

1. Are there indications of any of the following on the surface of the permeable pavement facility? (If yes, mark on site sketch)
   - Excessive sediment
   - Moss growth
   - Cracks, trip hazards, or concrete /asphalt spalling
   - Trash and debris
   - Leaf accumulation
   - Settlement of surface
   - Other: ___________________________________________________________________
   - None

2. Is there ponding on the surface of the permeable pavement? □ Yes □ No

If yes, describe the potential reasons for ponded water below (leaf or debris build up, non-functional underdrain, groundwater input, illicit connection, inadequate capacity in facility, etc.)

Notes

</table>

Observation Port (if present)

7. Is water remaining in the storage aggregate longer than anticipated by design after the end of a storm?
   □ Yes □ No □ Unknown
   a. If yes, identify potential cause of extended ponding and mark the location of observed extended ponding on your site sketch.
ADMINISTRATIVE TOOLS
INSPECTION CHECKLIST

Summary
8. Inspector’s Recommendations. When is maintenance needed?
   ☐ Immediately
   ☐ Within a month or two
   ☐ Within a year
   ☐ No sign that any maintenance is required

9. Summarize the results of this inspection and write any other observations in the box below.

   Summary and other observations
ADMINISTRATIVE TOOLS

RECORD KEEPING & TRACKING

• Parcel information

• City/County permit (ROW and/or building permit)

• Relevant sections of the Stormwater Site Plan

• “As-builts” or “record drawings” (individual lots and public ROW)

• Legal agreements (covenants, easements)
ADMINISTRATIVE TOOLS

RECORD KEEPING & TRACKING

• Location information (GPS data, digital maps)
• Project O&M manual (where applicable)
• Maintenance logs (typically included in a Project O&M Manual)
• Inspection forms
• Enforcement documents
ADMINISTRATIVE TOOLS

INTERPRETING PLANS & AS-BUILTS

• How to interpret construction plans, installation photos, and as-builts
ADMINISTRATIVE TOOLS

INSPECTION PROGRAMS

• **Immediately post-construction** for all LID BMPs - installed per plan and functioning properly

• **Every 6 months** (until 90% of lots are constructed) for permanent Stormwater Treatment and Flow Control BMPs/Facilities in new residential developments - identify maintenance needs and enforce maintenance standards

• **Ongoing annual** inspections for all Stormwater Treatment and Flow Control BMPs/Facilities (MR #6 and/or MR #7)
• Immediately post-construction for all LID BMPs installed per plan and functioning properly
• Every 6 months (until 90% of lots are constructed) for permanent Stormwater Treatment and Flow Control BMPs/Facilities in new residential developments - identify maintenance needs and enforce maintenance standards
• Ongoing annual inspections for all Stormwater Treatment and Flow Control BMPs/Facilities (MR #6 and/or MR #7)
