Pervious Concrete:
• A Great Product
Pervious Concrete:
• A Great Product
• An Awesome Potential for on site storm water processing

EPA will require some type of onsite processing in the very near future.

If you have experience with pervious concrete you may know how hard it is to clean.
But Guess What!

Pervious Concrete **CAN** Be Cleaned

Our unique equipment does an incredible job!

We can clean the clogged material and the moss out of the open pores of the concrete -- taking the pervious almost back to its original flow rate.
We reclaim almost all of the water we use and recycle it onboard with our equipment to be reused.

We don’t splash residue all over
• Surrounding landscape
• Cars, or
• Buildings

And there is so little water run off that…
Water and debris don’t run off to flow into bio-filter swales or stormwater drains!

You wouldn’t clean your carpets without removing the dirt and water when it’s finished, would you? So why allow it with pressure washing??
We do before and after infiltration testing to determine how well the flow will be improved.

Then quarterly cleanings are highly recommended to continue improving that flat rate and to keep the pervious operating optimally.

We also offer dry vacuuming in between cleanings to remove tree and landscaping debris.
Our pricing is based on the condition of the pervious concrete and how often it has been, and will be, cleaned.

By the way.....
We also offer all types of hard surface cleaning for areas such as:

- Parking structures
- Plazas and store fronts
Sidewalks and curbs

(However, this took a little extra scrubbing by hand.)

Bricks and pavers

Tile and grout
We can do Rust removal from most hard surfaces.

And here’s just a few of the other things that we do here at Paragon Industries.

Please contact us for an onsite demonstration of our process and an informational quote with “Best Practices” recommendations for your location(s).
