

Carry a Spill Kit

- Use absorbent pads or materials to cleanup drips and spills of chemicals, gas, or oil.

Power Tools and Equipment Maintenance

- Store gas and other fuels in labeled container with a closeable lid and nozzle.
- Place drip pans or absorbent pads on the ground in the refueling area to catch drips.
- Put rags with oil, gas, grease, or chemicals into a container labeled “Hazardous Waste.” Keep the lid closed.

Hazardous Waste Disposal

- Landscaping activities can create hazardous waste that needs special disposal, including rags or absorbent materials with:
 - Vehicle and equipment fluids, including gas, oil, grease, thinner, and solvent.
 - Organic chemicals, including pesticides, herbicides, and fertilizer.
- **Dispose of hazardous waste** properly.
 - **Option 1:** use a licensed waste hauler.
 - **Option 2:** bring small quantities of accepted waste to a hazardous waste drop-off location.
- **Keep records** of your hazardous waste disposal: who hauled it, how much was hauled, and when it was hauled.

Stormwater Pollution Prevention for COMMERCIAL LANDSCAPING

Keep our communities, creeks, lakes, and Puget Sound healthy.

Commercial Landscaping Best Practices for Pollution Prevention

Pesticides, Herbicides, and Fertilizer

- Follow guidelines in an **Integrated Pest Management Plan**, either your own or one from your local jurisdiction.
- Know your noxious weeds and local noxious weed laws.
- Use organic fertilizer when possible.
- Spread only the amount needed (and not more), follow label instructions.
- Keep the lid closed when not using, and make sure the label is legible and accurate.
- Store chemicals indoors or under cover and on a secondary containment pallet to catch any spills or drips.
- Never apply chemicals if it is raining or about to rain.

Control Practices
[kingcounty.gov/
WeedControlPractices](http://kingcounty.gov/WeedControlPractices)

Lawn Maintenance

- Check equipment for leaks before using.
- Refuel equipment over a drip pan or oil-absorbent pad to catch drips.
- Use electric or battery-powered equipment and minimize the use of gasoline and oil.

Excavating and Grading

- Avoid tracking mud and dirt onto the street, sidewalks, and gutters from vehicles and equipment when excavating and grading.
- Protect storm drains at and near jobsites using filter bags or absorbent socks/booms.
- Use fiber rolls, vegetation mats, silt fencing, and other erosion control materials to stabilize the soil after grading or excavating.
- Direct muddy water into landscaped areas to soak into the ground.

Cleanup

- Blow dead leaves and grass clippings into beds as mulch into beds as mulch. Do not blow onto streets or into storm drains.
- Rinse empty containers and dispose of rinse water in landscaped areas or reuse when making another spray mixture of the same chemical.
- Sweep up dry materials.
- Use water for cleanup **ONLY** where it will drain to landscaped areas.
- Do NOT use soap or chemicals in wash water, and do NOT direct it to the street, gutter, or storm drain.

Irrigation

- Use programmed irrigation systems to avoid overwatering, which may cause soil erosion. Prevent runoff from entering surface waters and paved areas.

Train Crews

- Train crews yearly on the use of hazardous chemicals and how to avoid spills and how to clean them up.
- Keep a record of the trainings and which staff attended.
