

Could your food truck be *a source of pollution?*

The Washington Stormwater Center is bringing you a FREE webinar on how to prevent pollution from your food truck. Learn best practices on proper handling of fats, oils, and grease, how to clean up a spill, or where to dump your mop water or sanitizing bucket. Get all your sticky questions answered by a team of Pollution Prevention Specialists from across the state.

April 18, 2022 | 9:00 - 10:00 am

Vikki Barthels works as a Pollution Prevention Specialist with the Spokane Regional Health District. She has worked at the Health District for 19 years, 13 of that as a Food Safety Inspector and for the last six years in pollution prevention. She works with local small businesses to provide free technical assistance training to help them reduce and manage potential waste to protect water, soil, and air quality. In her free time, she enjoys hanging out with her family, friends, traveling, running and biking.

Nikki Guillot is an Environmental Scientist at the City of Vancouver, Washington, and has been working on water resource protection there for seven years where she is a team lead on erosion control, facility maintenance, spill response and business assistance. She has a bachelor's of science in environmental science and recently completed a Master of Public Health program at Oregon Health & Science University, achieving certification from the National Board of Public Health Examiners in 2020. She has worked in clean water technical assistance since 2004 helping farmers, city staff, contractors, residents and business owners prevent pollution. She enjoys spending time outdoors with her family along the scenic Columbia River in Vancouver, Washington.
